

Scott Schechter

Project Manager, Software Developer, and System Administrator

Profile

I provide project management, software development, and system administration services. I listen to my customers needs to ensure they get the optimal solution for their problems. My focus is on solving my customers problems through technological means, not on the underlying technology used to achieve this.

Skills

Project Management

I have a proven track record of delivering high quality applications and services on time and on budget while working with geographically distributed teams. I also have excellent written and verbal communication skills. This ensures all project stakeholders always have accurate and timely information with which to make informed decisions. It also makes certain there are no unexpected surprises with project delivery.

Software Development

In both the private and governmental sectors, I have created applications of all sizes. From large scale enterprise desktop applications with domain wide deployment to single page real time web applications. This breadth of experience gives me broad vision to help you define your application requirements accurately. This ensures all work performed meets your critical business needs.

System Administration

I have worked with all of the most popular operating systems as well as the web and database management servers that run the applications on them. I know the intricacies involved with keeping them healthy and secure. I make certain your servers and applications are harmonious in their union. With these managed services you can decrease your overall information systems management costs thereby increasing profits for your business.
