
Professional Summary

I am an executive and engineer with a proven track record of delivering high quality software on time and on budget. I create custom software solutions and modernize legacy software systems to solve my customers' unique problems quickly and efficiently. I work with my customers and ask them questions about their current situation and future goals to ensure they get the optimal software solution to their problems. I enjoy providing elegant simplistic solutions to complex problems with ambiguous requirements.

Work History

CTO, NetVendor

2017 - Present

Tualatin, OR

Oversee and administer all technical matters for the organization. This includes platform engineering, product development, operations, management, and support. Lead engineering for all platform integrations as well as our custom optical character recognition stack that powers automated insurance document processing. Interface with customers directly to determine platform requirements and create specifications for the engineering department to execute.

CEO, Schechter & Co.

2005 - Present

Portland, OR

Provide consulting, software engineering, and application development services. Design, develop, maintain, and support custom software applications and platforms for my customers. I talk to my customers and listen to their needs and goals and translate those needs into actionable application requirements and specifications with accurate implementation estimates. I ensure the solution delivered will solve the problem presented.

Education

Murray State University

2001

Murray, KY

Bachelors of Science in Business Area of Information Systems
